

SHOP FLOOR TIME

Production insight from the operator terminal to the manager's decision.

Simple reporting of setup, production, pauses, downtime, good parts and scrap - in the context of the correct job, machine and operation.

WHAT PRODUCTION GAINS

01

A simple operator terminal

A touch-friendly workflow limits forms to the actions actually needed at the machine.

02

Better event context

Time, quantities, scrap and downtime reasons are assigned to the correct production job.

03

Data for faster decisions

The management view shows progress and stops without reconstructing a shift from paper notes.

DATA REVIEW

BOOK A PRESENTATION

Start with one machine or production cell.

Show us the current reporting method. We will propose a clear operator flow and a focused first pilot.
